

EXP NO 5	CLOUD BACKUP AND MIGRATION USING GOOGLE DRIVE
Date: 14.08.2026	

Aim

To create a cloud backup system by storing important files in Google Drive, enabling automatic synchronization, and verifying successful backup completion.

Requirements

- Windows 10/11
- Google Account
- Internet Connection
- Google Drive for Desktop

Procedure

Part A – Create Sample Data

Step 1: Create a Folder

A folder named OfficeData was created on the Desktop.

Step 2: Create Text Files

Three text files were created inside the OfficeData folder, and sample data was entered into each:

- Student.txt – Name : Student, Department : AI & DS
- Attendance.txt – Attendance : 95%
- Marks.txt – Cloud Computing : 98

The resulting folder structure was:

```
OfficeData
├── Student.txt
├── Attendance.txt
└── Marks.txt
```

Part B – Create Cloud Storage

Step 3: Open Google Drive

Google Drive was opened in a web browser using a Google account.

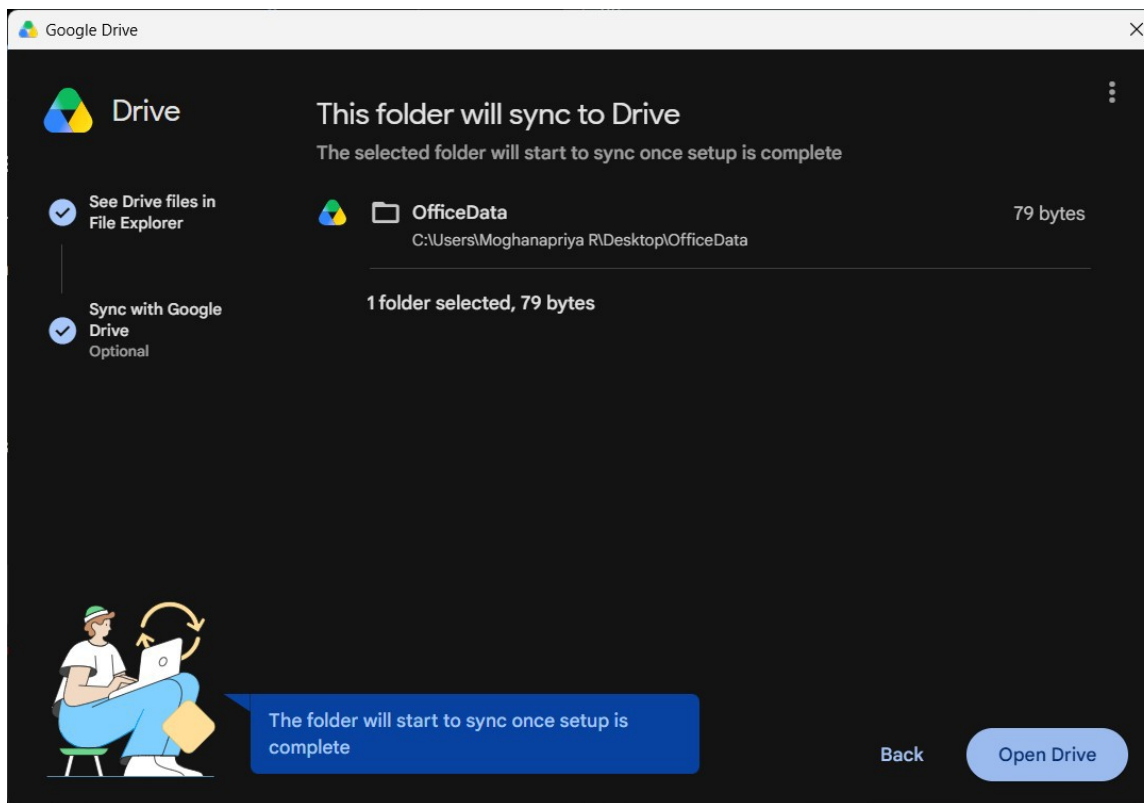

Step 4: Create CloudBackup Folder

A new folder named CloudBackup was created in Google Drive.

Part C – Upload Files to the Cloud

Step 5: Upload Sample Files

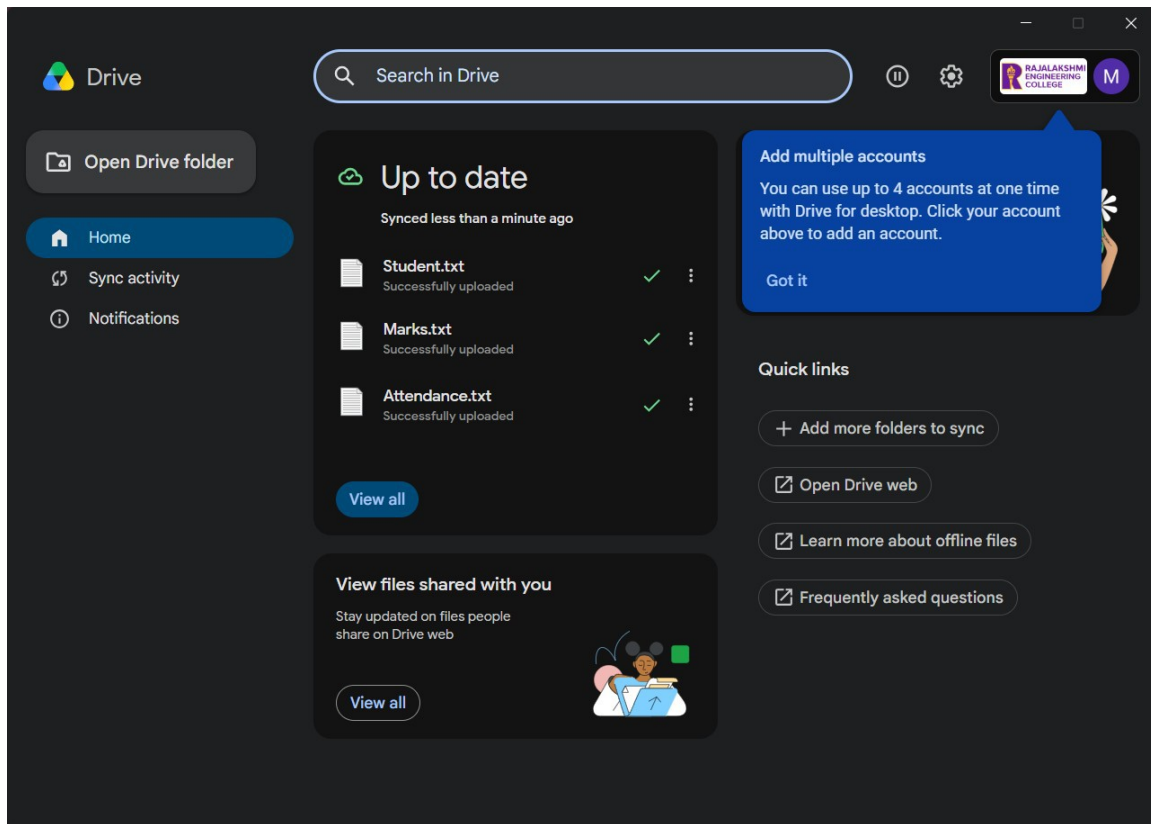

The three files — Student.txt, Attendance.txt, and Marks.txt — were selected from the local OfficeData folder and uploaded to the CloudBackup folder in Google Drive. This demonstrated the migration of local data to cloud storage.

Part D – Install and Configure Google Drive for Desktop

Step 6: Configure Google Drive Synchronization

Google Drive for Desktop was opened and configured using the same Google account. The local OfficeData folder was selected for synchronization with Google Drive. After configuration, the Google Drive application successfully uploaded Student.txt, Marks.txt, and Attendance.txt, and the synchronization status displayed “Up to date.”

Part E – Verify Cloud Backup

The synchronization status was checked in Google Drive for Desktop. All three files showed successful upload status, and the overall Google Drive status displayed “Up to date,” confirming that the local OfficeData files were successfully backed up to Google Drive.

Experiment Flow

Local Computer → OfficeData Folder → Student.txt + Attendance.txt + Marks.txt → Google Drive → Cloud Storage → Automatic Synchronization → Up to date → Cloud Backup Completed

Conclusion

The cloud migration and backup setup experiment was successfully completed using Google Drive. Important local files were migrated to cloud storage, automatic synchronization was configured, and all files were successfully uploaded. The synchronization status displayed “Up to date,” confirming the successful completion of the cloud backup process.
